The selection of the most cost-effective activated carbon for an application is best made by developing an understanding of the requirements of the application and matching them with the physical and adsorptive properties of the activated carbon. Choosing the proper carbon media for your application improves carbon performance, increases the time between carbon exchanges and helps minimize operating costs.

Evoqua offers a wide range of activated carbon products to solve application needs for both liquid and vapor streams. We are the exclusive supplier of Westates® activated carbons and feature virgin-grade products manufactured from coconut shells, bituminous and anthracite coals. We also offer reactivated carbons as an alternative to our virgin-grade products.

### AquaCarb® virgin and reactivated granular activated carbons
- Bituminous coal and coconut shell grades available
- Tailored for water treatment applications
- Specialty Grades include acid washed and NoRise™ pH stabilized carbons
- Virgin Grades NSF 61 certified
- AquaCarb CX (virgin) and AquaCarb CXS (reactivated) enhanced coconut for taste/odor and disinfection byproduct control
- NSF 61 certified reactivated grades available

### AquaPAC virgin and reactivated powdered activated carbons
- Bituminous coal based
- Virgin grades NSF 61 certified and designed for drinking water treatment
- Reactivated grades designed for wastewater and flue gas treatment

### BevCarb® virgin granular activated carbon
- High purity, acid washed, anthracite coal based
- Specifically developed for the preparation of high purity water for use in the manufacture of beverages
- NSF 61 Certified

### UltraCarb® virgin granular activated carbons
- Bituminous coal based
- Designed to efficiently purify and/or decolorize many aqueous and organic liquids.
- NSF 61 Certified

### VOCarb® virgin and reactivated granular and pelletized carbons
- Bituminous coal and coconut shell based granular products
- Anthracite coal based pelletized carbons
- Specialty grades include LoRise™ exothermresistant carbons

### MIDAS® OCM
- High capacity adsorbent for Odor Control (H₂S Removal)
