Feedwater Requirement

Source – originally from potable supply, then pre-treated ⁵	Preferably reverse osmosis (RO) produced by PURELAB Chorus 3 or filtered service deionization (SDI) or distilled. Note: mixed bed or twin bed deionized supplies should be cation limited at exhaustion.
Fouling index (max)	1 for all models. A 5-10 micron membrane prefilter is recommended for all non-RO feeds
Service deionization (SDI) – MΩ-cm	1 M Ω -cm minimum resistivity at exhaustion
Reverse Osmosis (RO) – µS/cm	Recommended <30 μS/cm
Free Chlorine	0.05 ppm max
тос	Recommended 50 ppb max (RO feed)
Carbon dioxide	30 ppm max
Silica	2 ppm max
Particulates	Filtration down to 0.2 micron advisable to protect internal and/or point of use filters
Temperature	1 - 40°C – Recommended 10 - 15°C
Flowrate (maximum requirement)	130 l/hr (34 USG)
Drain requirements (gravity fall with air gap). Maximum during service	Up to 2 l/min (0.5 USG)
Feedwater pressure	0.7 bar (10 psi) maximum, 0.07 bar (1 psi) minimum ⁴

⁴ Fit LA652 Pressure Regulator where feedwater pressure exceeds specified limits

Electrical Requirements

Mains Input	100 - 240V AC, 50 - 60Hz all models
System voltage	24V DC
Power consumption during peak demand (dispense)	90VA
Noise level during recirculation	<40 dBA

⁵ Choosing the correct Purification Pack

Part No.	When used
LC232	Feed water is General Grade RO (Type III) such as PURELAB Chorus 3 or distribution loop
LC244	Feed water is SDI (service deionization) with a 0.2µ prefilter fitted
LC245	Feed water is a filtered DI distribution loop or reservoir with recirculation maintaining a purity >1MΩ-cm
LC246	Guarantee the lowest TOC specification feed water is a filtered DI distribution loop or reservoir with recirculation maintaining a purity >1MΩ-cm
